**Hydraulic  
Wire Length Cutting Machine**

“

The DMI Machine of cut to length systems is designed to produce straightened, precisely cut, and close tolerance length pieces from wire material. Our Cut to Length Systems cut wire fast, accurate and leave clean, burr-free surfaces. DMI Cut to Length Machines can run a wide range of material with custom repeatable cut lengths(8mm-32mm range). These uniquely designed systems combine a front and rear stop with an anti-buckling guide for control and repeatability...stroke after stroke. These wire cut machines are engineered to feed fine wire and very long lengths with no buckling.

”

### Cutter Features

- Material holding device for optimal cutting accuracy
- Powerful pneumatic or hydraulic cylinder
- Integral guard protection
- Extremely wide range of materials
- Wire Cutting Equipment tooling to leave wire with formed ends including angle cuts, flattened ends, etc.
- Multiple diameters-Each of our cutoff systems has a wide capacity range that can run many different size diameters
